ATTESTATION OF CONFORMITY

Dear Sirs,

According to the new standards ISO 8573-1:2010; ISO 8573-2:2018 and ISO 8573-5:2001 were respectively used previously in the investigation of the compressors, the measurement about the total oil content (aerosols, liquids, and vapours) in the outlet air stream of below series Dry Oil-free Rotary Tooth Compressor has been validated.

Based on these Dry Oil-free Rotary Tooth Compressor similar construction and working principle, as a type test, RM-18A was randomly selected for the test.

Product name	Series	Models
Dry Oil-free Rotary Tooth Compressor	RM-18A	RM-11A; RM-15A; RM-18A; RM-22A; RM-30A/W; RM-37A/W; RM-45A/W; RM-55A/W; RM-11AVSD; RM-15AVSD; RM-18AVSD; RM-22AVSD; RM-30A/WVSD; RM-37A/WVSD; RM-45A/WVSD; RM-55A/WVSD.

The referenced guidelines and standards are as below:

ISO 8573-1:2010: Contaminant and purity clauses

ISO 8573-2:2018: Test methods for aerosol oil content method B1 (full flow method)

ISO 8573-5:2001: Test methods for oil vapour and organic solvent content

The type test report in the following has covered the entire range of Dry Oil-free Rotary Tooth Compressor.

The model under test is randomly selected at every series.

The test has been validated at the outlet of the air compressor without any cooling or oil removal devices in between the compressor and measurement point.

It is to clarify that at the specified test condition the quality of air from the above compressors qualified to be in the category "**Class 0**" in terms of total oil content, as defined in the standard ISO 8573-1:2010.

A detailed report with all conditions of the tests and results is available upon request.
